Abstract

This paper explains that value relevance research assesses how well accounting
amounts reflect information used by equity investors, and provides insights into
questions of interest to standard setters. A primary focus of financial statements is
equity investment. Other uses of financial statement information, such as contracting,
do not diminish the importance of value relevance research. Value relevance questions
can be addressed using extant valuation models. Value relevance studies address
econometric issues that otherwise could limit inferences, and can accommodate and be
used to study the implications of accounting conservatism. © 2001 Elsevier Science B.V.
